PROFESSIONAL SUMMARY

MCA graduate (2025) specializing in Cybersecurity and Ethical Hacking, seeking an entry-level role in Vulnerability Assessment and Penetration Testing (VAPT), Application Security, or Security Operations. Hands-on experience exploiting and analyzing web vulnerabilities (SQL Injection, XSS, Command Injection, File Inclusion) in lab environments, solving Linux security challenges, and building a blockchain-based identity management system. Strong foundation in web development (HTML, CSS, JavaScript, PHP) and version control with Git.

TECHNICAL SKILLS

Cybersecurity: Ethical Hacking, Vulnerability Assessment and Penetration Testing (VAPT), Web Application Security, HTTP Request/Response Analysis, SQL Injection, Cross-Site Scripting (XSS), Command Injection, File Inclusion

Blockchain: Blockchain Fundamentals, Smart Contracts, Ganache, Identity Management Systems

Programming and Scripting: HTML, CSS, JavaScript, PHP, C, Bash, SQL

Web Development: Responsive Web Design, Front-End Development, DOM Manipulation, Client-Side Scripting

Operating Systems: Linux (command line, file permissions, SSH)

Databases: MySQL, PostgreSQL, MongoDB

DevOps and Version Control: Git, GitHub, GitLab, CI/CD Concepts, DevSecOps

Tools: VS Code, Git Bash, MS Office

PROJECTS

Blockchain-Based Identity Management System | *Blockchain, Smart Contracts, Ganache*

- Developed a secure web-based identity management system using blockchain to store and manage user identity data and reduce the risk of data tampering.
- Integrated Ganache for local blockchain testing and smart contract interaction.
- Applied cybersecurity principles including data integrity, decentralization, and secure data handling.

Football Tournament Management Website | *HTML, CSS, JavaScript*

- Designed and developed a responsive website with team registration, match schedules, score display, and tournament details.

Restaurant Website | *HTML, CSS, PHP, MySQL*

- Built a dynamic website with back-end functionality for menu display and content handling using PHP.

Navabharat Night High School Website | *HTML, CSS*

- Developed a static, mobile-responsive website for a real client with pages for school information, announcements, and contact details.

HANDS-ON CYBERSECURITY LABS

DVWA (Damn Vulnerable Web Application) | *Web Application Penetration Testing*

- Exploited common web vulnerabilities in a controlled environment, including SQL Injection, Cross-Site Scripting (XSS), Command Injection, and File Inclusion.
- Analyzed HTTP requests and responses during vulnerability testing.

Bandit Linux Security Challenges (OverTheWire) | *Linux Security*

- Completed multiple levels of Linux-based security challenges covering file permissions, SSH access, and privilege navigation.
- Used grep, find, strings, base64, tar, and SSH to solve security tasks.

CERTIFICATIONS

- DevSecOps in CI/CD – Infosys Springboard
- Introduction to Cybersecurity – Cisco Networking Academy

EDUCATION

Master of Computer Applications (MCA) – Cybersecurity and Ethical Hacking

Yenepoya University, Mangalore, India | 2025
